

Testimonials

I couldn't practice without this product!

"My practice consists of phlebology exclusively. I now have been using the Veinlite for six months and, truthfully, cannot imagine practicing without this incredible device.

I now can visualize, without guessing, the location of feeding reticular veins. Tough telangiectasic matting has been reduced to a task that can be handled by direct injection of the vein(s) causing the mess. Sometimes I use the method of injecting directly while using the Veinlite, and other times I mark the veins before injections. I couldn't practice without this product!

Run, don't walk, to obtain one of these! I am ready to buy three more for my new locations."

Dr. Sanford Greenberg

Exceptional visualization of the reticular venous network

"The Veinlite provides excellent high quality transillumination of the skin and immediate subdermal tissues in fashion allowing exceptional visualization of the reticular venous network on the legs, arms, and other areas."

Dr. Rick Wilson, Plano Dermatology Associates, Plano, Texas

Everyday vein mapping made easy

"I use the Veinlite every day for mapping varicose veins and accessing reticular veins in my sclerotherapy practice."

Dr. Dwayne Taylor, Director of Sclerotherapy, Dermatology Associates of Atlanta, Atlanta, Georgia

Veinlite is a phenomenal tool for finding small veins

"We have used the Veinlite multiple times. We find it truly does find feeder veins. It has helped us with multiple blushers and I will have absolutely no reservations in promoting this Veinlite as being a phenomenal tool for finding those hidden, small veins that cause blushers and other veins around the knees."

Dr. Roger Y.Murray, M.D., Central Florida Vein Specialists, Altamonta Spring, Florida

I don't know how anyone can practice phlebology without the use of Veinlite

"I use the Veinlite extensively for the injection of reticular and connecting vein varicosities. I find it is especially useful to find feeder veins to flare type varicosities and it is extremely helpful in those very obese patients who have severe varicosities that are difficult to localize. In short, I don't know how anyone can practice phlebology without the use of the Veinlite. In my mind, it is an absolute necessity for adequate injection of reticular and connecting vein varicosities."

Dr. T.J. Buselmaier, M.D., FACP, FCP, Dermatology & Cutaneous surgery clinic, Coon Rapids, Minnesota

Physician and patient are impressed by Veinlite

"All physicians involved in phlebology should be using Veinlite. It is an optimal tool for foam sclerotherapy of reticular veins and for localization of feeder veins of spider veins. In miniphlebectomy Veinlite is an optimal aid for visualization of the extended venous plexus and thus allows precise interruption of junctions and perforating veins. My patients are often more impressed by seeing their venous network illuminated by Veinlite than the much more cost-intensive color duplex ultrasound examination. To sum up: for us Veinlite was an excellent investment both medically and commercially."

Dr. Alexander Flor, Vienna Day Clinic at the Döbling Private Clinic, Vienna, Austria

Less pain in less time, more effective for more satisfied patients

"I use my Veinlite very successfully every day. There is a remarkable increase in removed spider veins and feeder veins. Here's how I explain it: If you inject into a spider vein without Veinlite, it is like "scraping the leaves from a tree." If you do it with Veinlite, you see the smaller branches or even the trunk, and you inject at the root of the trouble."

After one year of experience with more than 1000 patients I think I'm able to make a statement:

1. Veinlite is a very fast and effective tool for examination. In the same process you treat the patients with sclerotherapy and less pain for the patients.
2. Much higher clearance rate.
3. All patients are satisfied and come back again and again."

Dr. Rüdiger Damisch Jun., Salzburg, Austria

After a short period of practicing, Veinlite is a highly effective tool

"After a short period of practicing, Veinlite proves to be a highly effective tool for intraoperative localization and sclerotherapy of small branch and reticular veins. Sclerotherapy usually can be performed in one session, even if sites are relatively large. Compared to an otherwise more prolonged mini-phlebectomy the duration of the intervention is much shorter and the cosmetic result is better. The patient has the advantage of a single-session, complete, painless and aesthetically optimized treatment without the need for subsequent corrections."
(Summary of a paper on light-assisted intraoperative sclerotherapy at the annual conference of the German Society of Phebology, September 2004, in Recklinghausen)

Dr. Michael Klein, Vascular Disorders Practice, Wuppertal, Germany

Veinlite, a new device from America, simplifies my work enormously

"Veinlite helps me to puncture the small feeding veins of spider vein areas, which are often difficult to identify and therefore difficult to puncture, with maximum contrast and good visualization. Even large-caliber branches can easily be localized and punctured with Veinlite in the collapsed state on recumbent patients. That saves me having to puncture the vein in a standing position followed by repositioning. To summarize, Veinlite is an excellent tool for achieving long-casting success in sclerotherapy and I can recommend it."

Dr. Karl Stefan Kussmann, Auenwald, Germany

Veinlite is a necessary device for sclerotherapy

"I am head of an aesthetic medicine center and the physicians are performing about 10000 treatments a year. Most of the work done is minimally invasive surgery and sclerotherapy. We recommend two main fields for Veinlite. First foam sclerotherapy, where a precise puncture is required in order to inject a larger amount of foam. On the other hand there are often reticular veins causing spider veins. But the reticular veins usually tend to disappear during the therapy. In both cases Veinlite is very helpful."

Dr. Gerhard Kögler, lifeAGEnts, Vienna, Austria

Thank you so much for selling me a product I can't live without!

Dr. Brian Proskiw, M.D. Kelowna, British Columbia, Canada
