LSP XTRA™ Backboard

The LSP XTRA Backboard continues the tradition of excellence in providing the EMS professional with affordable products of the highest quality.

XTRA is designed to be one of the most rigid backboards available. Fully x-ray translucent between the handholds, XTRA also provides approximately 50% greater "clear" area at the head of the backboard than our nearest competitor.

Nearly as rigid as our well-known HDx line, XTRA's unique patent-pending design will support loads in excess of 400 lbs. with minimal deflection. XTRA also has high buoyancy for water rescue.

This rigidity helps ensure the safety of your patient during transport, while the x-ray translucency allows for easy viewing of post-trauma x-rays.

XTRA works with all head immobilizers and strapping systems, is easily cleaned, and will not retain pathogens.

Available in four colors, in no-pin and 14-pin configurations, XTRA can also be imprinted with custom logos in up to three colors, with no setup charges and no minimum order.

Every body needs an XTRA Backboard!

LSP HDx Backboard®

The LSP HDx Backboard is a leading composite spine immobilization board, with over 10 years of proven durability and functionality. Our first entry into the composite backboard market, HDx features everything you ever needed in a plastic board and continues to be a best-valued seller.

- No-pin, 10-pin and 20-pin configurations for various strapping techniques.
- Identical dimensions and appearance to common wood backboards, permitting storage in existing locations.
- Numerous hand-holds for easy handling.
- Strong and durable, yet lightweight.
- Value priced to fit stringent budgets.
- Custom logos and labeling available.
- Colors: Red, blue, yellow, orange.

Specifications

Length: 72"

Width: 16"

Depth: 1.5" (including runners)

Capacity: 500 lbs.

Weight: 13.6 pounds

Material: High-density polymer

Standard Features: HDx, Stabilizer & SpineX Backboards

- One-piece seamless construction eliminates splitting, cracking or fluid penetration.
- Composite material that's impervious to blood and other substances for high resistance to contamination.
- Easy to maintain and clean.
- 100% recyclable.

Standard Features: Stabilizer & SpineX Backboards

- Textured surface less slippery in wet conditions.
- High impact resistance, even at temperature extremes.
- 8 molded-in speed-clip pins and numerous hand-holds for various strapping techniques and easy handling.
- Internal slats/openings provide for effective infant and pediatric immobilization without the risk of lateral movement should the patient need to be laterally rotated to clear or protect the airway.
- Pad-printed graphics, molded-in custom logos and labeling available upon request, providing reliable and secure identification.

LSP Stabilizer Backboard

Maximum dependability - maximum strength. Nothing else better describes the Stabilizer. This top of the line board was designed by paramedics for the EMS professional who needs maximum versatility and durability while immobilizing an injured victim. Manufactured without the added weight of a foam-filled center or reinforcement rods, its thick plastic wall alone provides tremendous strength and durability.

- Strap recesses on bottom of board to eliminate strap-to-ground contact.
- Side indentations for secure head immobilizer strapping.
- Wide center slots for quick immobilization of pediatric patients.
- Unique and narrow shape aids extrication in confined spaces.
- Colors: Red, blue, high-visibility yellow.

LSP SpineX Backboard

One tough board! That best describes the SpineX, with many of the features of the Stabilizer in a different configuration for safe immobilization with simplified transporting options.

- Tapered design for increased maneuverability.
- Plastic shell has extra thick corners for impact and abrasion resistance.
- Colors: Red, blue, high-visibility green.

LSP Infant/Pediatric Immobilization Board

The LSP Infant/Pediatric Immobilization Board is a versatile system capable of easily immobilizing infants and children with spinal injuries, or simply in need of restraint. It will accommodate children from infant to approximately 75 pounds (34 kg).

The unique harness system, which is integral to the device, allows easy manipulation of the child for proper airway management or radiological procedures. Once the child is positioned on the immobilization board, the spine is functionally maintained in a neutrally aligned static position. The split-leg strapping design allows each leg to be immobilized and treated separately.

The nylon covering is easy to clean and disinfect, and durable enough to withstand harsh treatment either in the field or hospital. The 1/2-inch backboard made of finished Baltic birch is also easy to clean and maintain.

The LSP Infant/Pediatric Immobilization Board is totally radioparent so the child can be X-rayed while still firmly attached to the board.

The optional Drug Dosage and Patient Management Sleeve (shown) is designed to enable you to attach the Broselow™ Tape or a customized patient management system as an integral part.

Specifications

Length: 47.5"	Depth: 0.5"	Capacity: 75 lbs.	Backboard: 0.5" Baltic birch
Width: 9.75"	Weight: 6 lbs.	Outer Covering: 500 Denier Cordura	Closures: Hook and loop

Miller Full Body Splint/Litter

The Miller Full Body Splint/Litter is a versatile spine immobilization board and litter that comes complete with a full head and body harness. This unique harness system will allow a victim to be rotated onto his side for proper airway management or extrication without jeopardizing spinal position. An optional helmet harness allows this same critical immobilization of a helmeted victim.

When used in conjunction with the LSP Half Back, the Miller Board can be used for safe vertical lifting in normal and confined space rescue without compromising patient safety or spine immobilization.

The many unique features of the Miller Board have made this the most popular rescue and immobilization product for over 20 years.

- Rigid foam core provides both strength and buoyancy for water rescue immobilization. The board will float 250 pounds in fresh water and 300 pounds in salt water.
- Strapping system allows the rescuer to immobilize and restrain combative patients.
- Split-leg design allows for easy independent leg traction, accessibility, and compatibility with the Stokes basket litter.
- Shoulder strap design prevents both lateral and horizontal movement of the patient during extrication and transportation.

Specifications

Color: Yellow
Length: 65.75"
Width: 14"
Depth: 3.25"
at fullest point
Weight: 15 lbs.

Outer Plastic Shell: High density polyethylene.
Temperature range -180°F to 240°F.
Resistant to gasoline and other chemicals.
Cleans with soap and water.

Injected Foam Core: Rigid polyurethane foam. Meets military specifications.
Webbing: #7226 commercial grade nylon. 2" 5000/6000 lbs. test. Washable.
Velcro: 2" hook and loop, black. Meets military specifications. Washable.

Nylon Fabric: 100% utility nylon, black, 200 denier.
Foam: #2 ethafoam. Meets military specifications.
Slide: Nickel plated steel.

LSP LIFE+LITE Emergency Stretcher

LSP LIFE+LITE emergency stretchers are used for patient transport in virtually any situation. Constructed of strong corrugated plastic and weighing only 4.5 pounds, the LIFE+LITE can support up to 500 pounds. Because of its construction and low cost, the LIFE+LITE can be easily disposed of and recycled, or cleaned and used again.

LSP LIFE+LITE Stretchers are ideal for disaster management and preparation, as well as HazMat and patient transport for hospital, prehospital and industrial applications.

(LIFE+LITEs are flexible and not intended for spinal immobilization.)

L724005 LIFE+LITE Disposable Emergency Stretcher. Sold only in cases of 5.

Specifications

Length: 72"
Width: 22"

Depth: 1" at handle
Weight: 4.5 lbs.

Capacity: 500 lbs.
Material: Corrugated plastic

LSP Half Back

The LSP Half Back is a versatile short body immobilization board designed for suspected cervical/spinal injuries during confined space extrication (such as automobile, storage tank, ship, etc.). It comes complete with a V-shaped padded head rest, a full head harness and an optional helmet harness for helmeted victims. Both harnesses can be used with the Miller Full Body Splint/Litter for safe and effective head immobilization. The closed-cell foam interior molds to the shape of the body, providing comfort and the most effective body immobilization.

When used in conjunction with the optional LSP Vertical Lift Strap Assembly, the Half Back can be used for:

- Vertical lifting of a spinal injury victim from a confined space or on a full body backboard.
- Vertical lifting of both rescuer and victim.

L710 Half Back Extrication/Rescue Vest with Removable Backboard

L720002-010 Standard Head Harness (black)

L720011 Vertical Lift Strap Assembly

L720003-010 Helmet Harness (black)

L720060 Carry Bag

Specifications

Color: High-visibility yellow
Weight: Vest - 7.5 lbs.
Back Stay and Head Harness - 3.5 lbs.
Size: Open - 34" long x 36" wide
Closed - 34" long x 12" wide x 7" thick
Jacket: 2-ply, water repellent junior ballistic nylon; minimum tensile strength of 715 lbs. for each ply

Foam: 0.5" thick 2# nonabsorbent closed-cell polyethylene foam
Back Stay: 5" wide x 33.5" long x 3/16" thick, 5052-H32 anodized aluminum alloy
Straps: 2" wide black nylon webbing with a minimum 6,000 lbs. tensile strength

Buckles: Forged alloy steel with a proof load of 2,500 lbs.
Velcro™: 0.75" and 2" black hook and loop
Cleaning: 100% washable

Qualified to:
ANSI A10.14-1975,
MIL-STD-45662,
MIL-I-45208A (free fall drop test and 50 hr. salt spray test)

LSP Vertical Lift Strap Assembly

The LSP Vertical Lift Strap Assembly provides for two- or three-point vertical lifting and is designed to be used in conjunction with the LSP Half Back and the Miller Full Body Splint/Litter. It meets all ANSI and military standards for vertical lifting with a 6,000 pound load capacity.

L720011 Vertical Lift Strap Assembly

Specifications

Color: Black
Weight: 2 lbs.
Straps: 1.75" wide black nylon webbing with a minimum 4,700 lbs. tensile strength

Buckles: Forged alloy steel with a proof load of 2,500 lbs.
Cleaning: 100% washable

Qualified to:
ANSI A10.14-1976,
MIL-STD-45662,
MIL-I-45208A
(Free fall drop test and 50 hr. salt spray test)

LSP Cinch Rescue Collar

Developed by air rescue professionals, the LSP Cinch Rescue Collar is a multi-use rescue device offering security and simplicity for the victim and versatility for the rescuer.

This first-line rescue device allows victims to enter the harness from either side of the loop, with head and arms extended. Once the rescuer exerts tension to the rope, the victim's weight releases the connector and allows the collar to cinch around his chest, preventing him from slipping out in the event he becomes unconscious.

- Designed for safe recovery of victims in swift water or blue water.
- Can be used for helicopter, landbase and watercraft rescues, as well as high-rise and cliff extrications, and confined-area rescues.
- May be stored and carried in the durable, lightweight carry case in ready-to-use position.
- Interior made of non-absorbent, closed-cell foam; exterior covering is a tough, stain-resistant, washable Cordura.

L593 Cinch Rescue Collar with Carry Case

Specifications

Color: High-visibility yellow
Weight: 3.5 lbs.
Size: Open position, inside diameter approx. 20"
Material: 500 Denier Cordura, urethane coated

Thread: Bonded nylon
D-Ring: Aluminum, anodized 5,000 lb. (2,272 Kg) proof load (MIL-SPEC-22046-7)
Foam: Closed cell polyethylene

Straps: 2" (5.08 cm) wide black nylon webbing with a minimum 6,000 lb. (2,272 Kg) tensile strength
Velcro™: 1" (2.59 cm) black hook and loop; meets military specifications

Clip: Delrin
Zipper: Nylon
Cleaning: 100% washable

LSP Trauma Air Pants

LSP Trauma Air Pants are designed to promote emergency care for the victim experiencing hypovolemic shock. They provide complete counter-pressure around the legs and abdomen, combining safety and comfort for the patient. LSP Trauma Air Pants are especially suitable for pre-hospital and hospital use. Both the Adult and Pediatric Trauma Air Pants provide the following specialized features:

- Handles are strategically located on the torso area and both legs for easy positioning and patient movement.
- All bladders have a lifetime warranty against breakage. The pant material has a 2-year warranty.
- Unique design allows the pants to open outward and lie flat for easy application and patient accessibility.
- Color coded Velcro™ straps and luminescent pressure gauges for easy nighttime application.
- Inflation pump can be used with foot, hand or knee pressure.
- Adult pants are easily downsized to fit either a small adult or a pediatric patient.
- Soft-pack carry bag is padded for protection, and the strap system converts to a backpack for carrying ease.

L600 Trauma Air Pants, Adult, with 3 Gauges, Pump Assembly, Bag

L601 Trauma Air Pants, Adult, with 1 Gauge, Pump Assembly, Bag

L611 Trauma Air Pants, Pediatric, with 1 Gauge, Pump Assembly, Bag

L612 Trauma Air Pants, Pediatric, with Pressure Relief Valves, Pump Assembly, Bag

Specifications

Outside Fabric:
420 denier nylon fabric

Inner Bladder:
Clear 12 mil ether-based polyurethane. Ultra-violet, bacteria and fungus stabilized. Suitable for extensive water immersion and air retention. Comes with a lifetime warranty.

Pump:
High grade neoprene

Hoses:
Surgical quality latex

Hose Connectors, Fittings, Adapters:
Injection molded high impact, moisture resistant nylon.

Gauges:
Phosphorescent gauges
0-200 mm Hg

Pressure Relief Valves:
Pop-off pressure
110-135mm Hg

Velcro™ Closures:
Color coded white, black

Bag:
200 denier nylon soft side

Schuco® Inflatable Air Splints

Essential for any first aid supply, Schuco Inflatable Air Splints provide immediate immobilization of injured limbs. Orally inflated via a screw air valve, the splint doubles as a self-contained tourniquet to stem the flow of blood and promote infection control. Transparent plastic and nylon zipper permits X-rays and constant observation of the injury.

- Available singly and in kits in a variety of sizes for adults and children.
- May be washed and sterilized by gas or cold solution for reuse.

LSP Trauma/Burn Kits

LSP Trauma/Burn Kits are professionally designed for the wet or dry emergency treatment of localized thermal, friction, electrical and chemical burns. The kits are ideal for ambulances and paramedic disaster response vehicles. They are especially suited for the treatment of trauma/burn accidents encountered in industrial facilities, restaurants, commercial kitchens, trucks, hotels, and gas stations ... anywhere major medical injuries can occur.

The heart of the LSP Trauma Burn Kit is the unique design and function of the Trauma/Burn Towel Dressings found in each Burn Kit.

Each Trauma/Burn Towel Dressing is composed of a tri-laminate material designed to provide the patient with the following benefits:

- Towels may be used wet or dry to meet local burn treatment protocols.
- The non-adhering material will not stick to a burn, abrasion or trauma wound.
- The non-wicking property will not absorb vital body fluids from the burn or trauma wound.
- The unique design of the towel prevents fibers from shredding or infiltrating the wound site when used wet or dry.
- The foam core center of each towel will hold 19 times its weight in water, thereby effectively cooling the burn for an extended period of time.
- The variety of sizes available considerably reduce cost as they eliminate having to use a large towel to treat a small burn.
- Each towel is sterile and individually packaged for a 5-year shelf life.
- The patented LSP Trauma/Burn Face Mask is the only dressing specifically designed to treat difficult facial trauma and burns. The towel provides complete coverage as well as access to the patient for monitoring vital signs and administering oxygen.

LSP Mini Kit

L810 Mini Kit

1 Nylon Carrying Bag 11" x 6" x 9"
(280 mm x 150 mm x 228 mm)
